ADDITIONAL NOTES: The run contains an additional six blank solutions at vials 29-34. It was anticipated that the original sample to be placed in vials 29 and 32 contained toluene based on tube type; therefore, two blanks would be run after each duplicate (vials 30,31 and 33,34) to account for the anticipated toluene. Upon sampling the tube was found to contain a separation gel with what was thought to be whole blood. A sample was not taken from the tube due to the gel's presence, and each duplicate (vials 29 and 32) was replaced with a blank solution.
