

Scottsdale Fire Department Proposed New Fee and Supporting Report Pursuant to A.R.S. § 9-499.15 for Fire Protection System Compliance Reporting

November 1, 2018

The City's fire code authorizes the Fire Department to establish the means of how required third-party fire protection system inspections, testing and maintenance reports are made to the Fire Department.

Currently this task is accomplished manually and it is difficult to track, audit and reconcile third party fire protection system inspections, testing and maintenance.

The Fire Department will be moving to an internet based solution and the proposed fee covers the administration and cost of a third-party fire protection system inspections, testing and maintenance to an internet based reporting and tracking system.

The new internet based system requires clients to upload the information, both with and without deficiencies, into the system. The system then tracks compliance, notifies responsible party of deficiencies as well as re-inspection deadlines.

The new Fire Protection System Compliance Reporting Fee shall be \$30.00 per report submitted.

A copy of this report will be filed with the Scottsdale City Clerk.
