

NEED FOR PROJECT:

The project is being developed based on the need to improve the operational characteristics of Pima Road. The following needs have been identified:

- Accommodate current and future traffic generators:
 - Local traffic generators – businesses, stores, schools, offices and neighborhoods
 - Regional traffic generators – Pima Freeway
- Mitigate safety concerns associated with left turn movements
- Consolidate access points along the corridor
- Meet COS and SRP-MIC General plans recommendations

Additional opportunities presented with the project:

- Incorporate multi-modal features – transit and on-street bike lanes
- Enhance the character of the corridor – combine the culture and history of the two communities
