## How does Scottsdale's advanced treated recycled water measure up to bottled water?

Scottsdale's state-of-the-art water quality lab subjected a leading bottled water brand to the same testing standards used for the recycled water produced at the Advanced Water Treatment Plant. The following list includes testing results for everything that was detected in either water. The table on the reverse lists over 100 additional substances that were tested for and not detected – down to at least the part per million – in either water.

Results for recycled water represent an average of several months of testing.

\* The EPA maximum contaminant level for nitrate in drinking water is 10 mg/L.

\*\* pH was not adjusted prior to delivery to allow individual breweries flexibility for their specific brewing processes.

\*\*\* The EPA maximum contaminant level for TTHMs in drinking water is 80 µg/L.

mg/L = part per million    µg/L = part per billion    pCi/L = picoCuries per liter    µmho/cm = micro mhos per centimeter
